For Immediate Release

Pixelmetrix launches DVStor-IP, which handles simultaneous recording of multiple IP video channels

Singapore, May 2005 - Pixelmetrix, the global expert in Preventive Monitoring for digital television networks, has just launched the Pixelmetrix DVStor-IP, a cost-effective hard disk-based system that allows non-stop simultaneous recording of multiple channels of transmitted IP video.

"DVStor-IP allows broadcasters who are using Internet Protocol Television to verify that a specific transmission actually happened at a given time," said Danny Wilson, President and CEO of Pixelmetrix. "It's not just necessary because of legal compliance. It's also useful for resolving disputes because there is a record of the transmission to check against."

The video is recorded by specifying the source IP address and destination IP address of the transmitted video. A continuous archive of recorded video is created on a "First In, First Out" (FIFO) basis. This means that out-of-date material is removed to allow for fresh recordings. However, when necessary, selected segments can also be locked to prevent it from being removed or overwritten.

The recorded IP video can be subsequently played back to any remote machine with a video player.

DVStor-IP comes in both 1U and 4U configuration, with disk storage capacity ranging from 100GB to 2TB. Depending on usage, this could represent anywhere from a few hours to a month of IP video storage.

"When you're in a broadcast environment that needs high reliability and performance, DVStor-IP is the ideal solution," said Wilson.

About DVStation Products

The award-winning DVStation family of products by Pixelmetrix is used for monitoring the quality and performance of digital networks. DVStation is the only all-in-one solution that can monitor a signal path from studio to home. The operator sets the monitoring thresholds and alert methods for the entire network from a single location. DVStation will notify operators if there's trouble, with alerts delivered remotely over a corporate LAN, the Internet or even to a pager. DVStation is the most advanced Preventive Monitoring solution available today. When signal and content integrity is essential for business success, DVStation is the only logical solution.

The DVStation family is available as DVStation, DVStation-Remote, DVStation-Pod, DVStation-IP, DVShift, DVShift-HD, and DVStor.

About Pixelmetrix Corporation

Pixelmetrix Corporation is the global expert in Preventive Monitoring for digital television networks. The company provides equipment and network intelligence systems to television broadcasters for management and monitoring of quality of service. Headquartered in Singapore, Pixelmetrix has offices in the United States and Europe. Pixelmetrix customers include CNN, CBS, Disney, HBO, NHK, Japan Telecom, KPBS, NTL, Sky PerfecTV! Japan, British Telecom, Canal+, and Télédiffusion de France.

Pixelmetrix is the winner of the Peter Wayne Award for Best Design and Innovation IBC 2000, winner of the STAR 2000 and 2004 Superior Technology Award from TV Technology Magazine, recipient of a Cable-Satellite/Mediacast Product of the Year Award in 2003 and 2004, and winner of Broadcast Engineering magazine's Pick Hit Award 2005.
