Miranda and Pixelmetrix Announce Partnership for Visual Monitoring/ Quality Control Solution for Broadcast Facilities

IBC, Amsterdam - September 8, 2000 - Miranda Technologies and Pixelmetrix announced a partnership to develop integrated Visual Monitoring/Quality Control Solution with the Miranda Kaleido-QC and Pixelmetrix DVStation.

Kaleido-QC is designed to replace an entire suite of dedicated control panels and monitoring equipment with a single computer workstation or rack-mounted, touch-screen display, to provide a simple and intuitive tool for monitoring and control of sources, routers and signal processing devices.

DVStation is a multi-port, multi-layer monitoring and impairment system designed specifically for digital video network and transmission operators. Designed like a powerful parallel computer, DVStation monitors and correlates inputs of up to 21 ports and multiple layers (physical, transport, and quality) in real-time. A single system can simultaneously connect to several points along the transmission chain.

Using the DVStation monitoring platform, the Kaleido-QC will be able to seamlessly obtain information about DVB/ASI streams and other MPEG-compressed streams, and judge the quality of the signal, based on user-defined parameters.

Yves Nolin, Vice President of Sales for Pixelmetrix, said, "While each system works independently, the union between the two via Miranda's software architecture provides a wealth of information to the user. Bringing the DVStation's abilities to the Kaleido-QC offers an unprecedented end-to-end service quality control system for broadcast facilities."

About Miranda

Miranda Technologies Inc. is a leading provider of digital video and audio interfaces, DTV/HDTV converters and advanced display products. The Company's products have become the defacto standard in major TV networks, post-production facilities and AV facilities around the globe. Miranda is recognised as a forerunner in video digital signal processing (VDSP) and digital television & HDTV technologies.

About Pixelmetrix

Pixelmetrix Corporation is focused on providing specialized instruments to the digital video broadcast industry. Pixelmetrix applies telecom network management and test techniques to enable a smoother transition to digital broadcasting. It employs experts in telecom, broadcasting, and the Internet and combines their strengths to design innovative solutions for the new digital networks.
